Construction Information Systems Limited expressly disclaims all and any liability and responsibility to any persons, whether a purchaser or reader of this publication or not, in respect of anything, and of any consequence of anything, done or omitted to be done by any such person in reliance, whether wholly or partially, upon the whole or any part of the contents of this publication. The contents of this publication are an assistance to purchasers and readers, but it is the purchasers’ and readers’ responsibility to determine the appropriateness of such contents. Therefore Construction Information Systems Limited will not be liable in respect of any use or application of such contents.

Use the current edition
This specification is published annually and is aligned with BCA Volume 2 of the NCC for Class 1 and Class 10 Buildings.

NATSPEC SIMPLE DOMESTIC SPECIFICATION is a reference specification and does not require editing or amendment. It is intended for inclusion, along with other documents such as drawings and schedules, as a condition of contract for the building works. It assumes all project specific design information is shown on the drawings or in schedules, including the specific requirements of the South Australian Housing Trust (SAHT). The Preliminaries worksection provides for the requirements of the drawings and schedules to override conflicting requirements of this reference specification.

National Construction Code
The National Construction Code (NCC), including state and territory variations, is enforced by local authorities and controls domestic construction in Australia, along with the requirements of statutory authorities (e.g. electricity and water supply). This specification has been aligned with BCA Volume 2 of the NCC but any local requirements must take precedence. NATSPEC recommends that the users of this document have ready access to BCA Volume 2 for Class 1 and Class 10 Buildings. It is available online. Go to https://ncc.abcb.gov.au/ to register.

Work Health and Safety (WHS)
Everyone at a workplace is responsible for complying with stringent Occupational Health and Safety legislation. However, the accountable person has primary control over the workplace and therefore the greatest WHS responsibility. A builder engaged to manage a project and organise the relevant sub-contractors is the accountable person and must make sure that they, their employees and sub-contractors work in a safe manner. An owner builder, engaging independent tradespeople as required, is the accountable person responsible for ensuring the tradespeople comply with safety standards. WHS legislation in some States and Territories also includes statutory obligations on designers in relation to WHS issues arising out of their designs during and after construction. It is important to note that WHS obligations differ in each State and Territory. Go to www.safeworkaustralia.gov.au to see WHS legislation for each.

Standards and tolerances
Check that the building work conforms to requirements of the drawings, schedules and this specification. Guide to Standards and Tolerances is a reference document of best construction practice available on the web.

Dispute resolution
Many building contracts include dispute resolution provisions and in most states there are dispute resolution services provided and/or mandated under State legislation

SAHT specific requirements
The SAHT has specific building requirements which are additional to this specification. These requirements are included as separate documents titled South Australian Housing Trust (SAHT) construction requirements for class 1A buildings and SAHT fixtures and fitting schedule – Class 1A buildings.

Make sure all subcontractors are aware of the requirements within 0180 Common Requirements.
This page is blank.
1 THE SITE

1.1 OCCUPIED PREMISES

General: For the parts of the site designated as occupied premises:
- Allow occupants to continue in secure possession and occupancy of the premises for the required period.
- Maintain safe access for occupants.
- Arrange work to minimise nuisance to occupants and for their safety.
- Protect occupants against weather, dust, dirt, water or other nuisance.

Proposals: Submit details of proposed methods.
- Purpose of submission: Information only.

Protection of persons and property
Temporary works: Provide and maintain required barricades, guards, fencing, shoring, temporary roadways, footpaths, signs, lighting and traffic management.
Accessways and services: Do not obstruct or damage roadways and footpaths, drains and watercourses and other existing services in use on or adjacent to the site.
Determine the location of such services.
Property: Do not interfere with or damage trees and property which are to remain on or adjacent to the site, including adjoining property encroaching onto the site.

Rectification
Accessways and services: Rectify immediately any obstruction or damage to roadways and footpaths, drains and watercourses and other existing services in use on or adjacent to the site. Provide temporary services whilst repairs are carried out.
Property: Rectify immediately any interference or damage to trees and property which are to remain on or adjacent to the site, including adjoining property encroaching onto the site.

Existing services
Service to be continued: Repair, divert or relocate, as documented.
Trenches: If the existing service crosses the line of a required trench, or will lose support when the trench is excavated, provide permanent support for the existing service.
Redundant services: Remove redundant parts and make safe.
Interuptions to services: Minimise the number and duration of interruptions.

Signs
General: Provide a signboard displaying the lot number, the builder's name, address and licence number, and the BCA accreditation authority, address and contact details, if required.

1.2 BUILDING THE WORKS

Order of precedence of documents
Precedence: Requirements of the schedules and drawings override conflicting requirements in this reference specification.

Survey marks
Definition: A survey peg, bench mark, reference mark, signal, alignment, level mark or any other mark used or intended to be used for the purpose of setting out, checking or measuring the work.

Care of survey marks: Preserve and maintain the principal's survey marks in their true positions.
Rectification: If the survey marks are disturbed or obliterated, immediately rectify.

Items supplied by owner
General: Materials and other items supplied free of charge to the contractor for installation in the execution of the works, as documented.
Unload and take delivery, inspect for defects and take care of the items. If defects are found, advise. Return unused items to the principal.

1.3 MISCELLANEOUS

Contractor and owner to observe confidentiality
Publicity: Do not issue information concerning the project for publication in the media without prior written approval of the owner.

0180 COMMON REQUIREMENTS

1 GENERAL

1.1 APPLICABILITY

General
Requirement: Conform to 0171 General requirements, as appropriate, in all worksections.

1.2 STANDARDS

Current editions
General: Use referenced Australian or other standards (including amendments), and the NCC including state and territory variations which are current three months before the date of the contract except where other editions or amendments are required by statutory authorities. Any local authority requirements take precedence.

1.3 INTERPRETATION

Abbreviations
General: For the purpose of this document the following abbreviations apply:

Definitions
General: For the purposes of this specification, the following definitions apply:
- Contractor: Means the same as builder.
- Documented: Documented, as documented and similar terms mean contained in the contract documents.
- Hot-dip galvanized: Zinc coated to AS/NZS 4680 after fabrication.
- Metallic-coated: Steel coated with zinc or aluminium-zinc alloy via a continuous hot-dip process.
- Owner: Owner has the same meaning as client, principal or proprietor and is the party to whom the contractor is legally bound to construct the works.
- Professional engineer: As defined by the NCC.
- Proprietary: Identifiable by naming manufacturer, supplier, installer, trade name, brand name, catalogue or reference number.
- Provide: Provide and similar expressions mean supply and install and include development of the design beyond that documented.
- Required: Means required by the contract documents, the local council or statutory authorities.
- Supply: Supply, furnish and similar expressions mean supply only.

1.4 BUSHFIRE PROTECTION

General
Conformance: In areas designated as bushfire prone, comply with statutory and local authority requirements.
Standard: To AS 3959.

2 PRODUCTS

2.1 GENERAL

Manufacturers’ or suppliers’ recommendations
General: Provide and select, if no selection is given, transport, deliver, store, handle, protect, finish, adjust and prepare for use the manufactured items to the manufacturers’ or suppliers’ recommendations.
Proprietary items/systems/assemblies: Assemble, install or fix to substrate to the manufacturers’ or suppliers’ recommendations.

Substitution
Identified proprietary items: Identification of a proprietary item does not necessarily imply exclusive preference for the identified item, but indicates the necessary properties of the item.

Alternatives: If alternatives to the documented products, methods or systems are proposed, submit sufficient information to permit evaluation of the proposed alternatives.

2.2 TIMBER

Acclimatisation
General: Acclimatise timber fitouts by stacking them for two weeks in the in-service conditions with air circulation to all surfaces after the following are complete:
- Air conditioning operational.
- Lighting operational.
- Site drainage and stormwater works are complete.
- Space fully enclosed and secure.
- Wet work complete and dry.

Unseasoned timber
General: If unseasoned timber is provided, or variation in moisture content is likely, make allowance for shrinkage, swelling and differential movement.

Durability
General: Provide timbers with natural durability appropriate to the conditions of use or preservative-treated timbers of equivalent durability.
Natural durability class of heartwood: To AS 5604.
Preservative treatment: To the AS 1604 series.
Minimum requirement: To the **Natural and treated timber durability table**.

Natural and treated timber durability table

<table>
<thead>
<tr>
<th>Exposure</th>
<th>Natural timber</th>
<th>Treated timber</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inside, above ground, completely protected from the weather, well ventilated</td>
<td>Class 4</td>
<td>H1</td>
<td>Treated timber resistant to lyctids. Untreated timber must be protected from termites</td>
</tr>
<tr>
<td>Inside, above ground, protected from wetting with nil leaching, well ventilated</td>
<td>Class 3</td>
<td>H2</td>
<td>Treated timber resistant to borers and termites. Untreated timber must be protected with a finish</td>
</tr>
<tr>
<td>Above ground, exposed to weather, periodic moderate wetting and leaching</td>
<td>Class 2</td>
<td>H3</td>
<td>Treated timber resistant to borers, termites and moderate decay. Applicable to weatherboards, fascias, pergolas (above ground), window joinery, framing and decking</td>
</tr>
<tr>
<td>In-ground</td>
<td>Class 1</td>
<td>H4 (Severe wetting and leaching)</td>
<td>Treated timber resistant to borers, termites and severe decay. Applicable to fence posts, greenhouses, pergolas (in-ground) and landscaping timbers</td>
</tr>
<tr>
<td></td>
<td></td>
<td>H5 (Extreme wetting and leaching and/or critical uses)</td>
<td>Applicable to retaining walls, piling, house stumps, building poles, cooling tower fill</td>
</tr>
</tbody>
</table>

2.3 STEEL

Durability
General: Provide steel products protected from corrosion to suit the conditions of use.
Internal engineer designed steel members: Remove mill scale, rust, moisture and oil. Coat with a zinc phosphate primer to the manufacturer’s instructions.
Built-in products below damp-proof course: Stainless steel 316 or engineered polymer.

Corrosion resistance
Atmospheric corrosivity category: To AS 4312 and the AS/NZS 2312 series.
Minimum external corrosion protection requirements for corrosive environments: Conform to BCA Volume 2.

Preparation and pre-treatment
Standard: To the AS 1627 series.

Galvanizing
General: Galvanize mild steel components (including fasteners) to AS/NZS 1214, AS 1397 or AS/NZS 4680, as appropriate, and in the following conditions:
- Exposed to weather.
- Embedded in masonry.
- Exposed to or in air spaces behind external leaves of masonry walls.
- In contact with chemically treated timber.

2.4 PROTECTIVE COATINGS

General
Environment: To AS 2312.1 clause 2.3.
Coating designation: To AS 2312.1 Table 6.3.

CCA (copper chrome arsenic) treated timber
Greasing: Before placing bolts or other metal components in contact with CCA-treated timber, paint contact surfaces or coat in grease or a bituminous coating.
Unseasoned timber
General: Do not fix in contact with steel framing without fully painting the contact surfaces of timber and steel.

2.5 FASTENERS
Self-drilling screws
Standard: To AS 3566.1.

2.6 VAPOUR BARRIER
General
Vapour barrier to slabs: To AS 2870 clause 5.3.3.
Minimum thickness: 0.2 mm.

2.7 DAMP-PROOF MEMBRANES
General (Damp-proof)
Damp-proof membrane: To AS 2870 clause 5.3.3.
Type: High impact resistant polyethylene film, minimum 0.2 mm thick. which has been pigmented and branded by the manufacturer.

3 EXECUTION

3.1 WALL CHASING
Holes and chases
General: Make holes and chases required in masonry walls so that the structural integrity of the wall is maintained. Do not chase walls with a fire-resistance level or an acoustic rating.
Parallel chases or recesses on opposite faces of a wall: Not closer than 600 mm to each other.
Chasing blockwork: Only chase core-filled hollow blocks or solid blocks not documented as structural.

Concrete blockwork chasing table

<table>
<thead>
<tr>
<th>Block thickness (mm)</th>
<th>Maximum depth of chase (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>190</td>
<td>35</td>
</tr>
<tr>
<td>140</td>
<td>25</td>
</tr>
<tr>
<td>90</td>
<td>20</td>
</tr>
</tbody>
</table>

3.2 MOISTURE CONTENT
Alignment of flooring and subfloor
Concrete subfloor: Do not start installation of the flooring until the moisture content of the concrete subfloor conforms to AS 1884 clause 3.1.
Timber, plywood or particleboard flooring subfloors: Do not start installation of the flooring until the moisture content of the subfloor conforms to the following:
- Dry in-service environment (air conditioned buildings): 8 to 10%
- Normal in-service environment (intermittently heated buildings): To 12.5%
- Moist in-service environment (unheated buildings): 12.5 to 15%

3.3 FIXING
General
Suitability: If equipment is not suitable for fixing to non-structural building elements, fix directly to structure and trim around penetrations in non-structural elements.

Fasteners
Sufficiency: Use proprietary fasteners capable of transmitting the loads imposed, and sufficient for the rigidity of the assembly.

3.4 FOOTPATH CROSSING
General
Requirement: Provide a footpath and kerb crossing to local authority requirements.

3.5 COMPLETION
General
Removal of temporary work, services and plant: Remove temporary work services and construction plant within 10 working days after occupation of the works.
Final cleaning: Remove rubbish and surplus material from the site and clean the works throughout including interior and exterior surfaces exposed to view. Vacuum clean carpeted and soft surfaces. Clean debris from the site, roofs, gutters, downpipes and drainage systems.
Samples: Remove non-incorporated samples, sample panels and prototypes.
Warranties: Register with manufacturers, as necessary, and provide copies of manufacturers’ warranties.
Instruction manuals: Provide the manufacturers’ instruction manuals.
Operation: Make sure moving parts operate safely and smoothly.
Surveyor’s certificate: Provide a certificate which confirms that the work, including boundary fences, has been correctly located.
Services layout: Provide a plan which shows the location of underground services.
Authorities’ approvals: Provide evidence of approval of the local authority or principal accredited certifier and statutory authorities whose requirements apply to the work.
Keys: Provide two keys for each set of locks keyed alike and two keys for each lock keyed to differ.

0184 TERMITE MANAGEMENT

1 GENERAL

1.1 STANDARDS
General
Standard: To AS 3660.1.

Termite management system notice
Requirement: Permanently fix a durable notice in a prominent location to BCA 3.1.4.4.

Certification
Requirement: Submit installation certificate to AS 3660.1 Appendix A3.
## 0201 DEMOLITION

### 1 GENERAL

#### 1.1 STANDARDS

Demolition
Standard: To AS 2601.

#### 1.2 SUBMISSIONS

Records
Dilapidation record:
- Before demolition: Submit to each owner of each adjacent property, a copy of the part of the record relating to that property and obtain their written agreement to the contents.
- Rectification work: Submit written acceptance of rectification works from the owner of each adjoining property affected.

### 2 EXECUTION

#### 2.1 SUPPORT

Temporary support
Existing buildings: Until permanent support is provided, provide temporary support for sections of existing buildings which are to be altered and which rely for support on work to be demolished.

#### 2.2 PROTECTION

Encroachment
General: Prevent the encroachment of demolished materials onto adjoining property, including public places.

Weather protection
General: If walls or roofs are opened for alterations and additions, or the surfaces of adjoining buildings are exposed, provide temporary covers to prevent water penetration. Provide covers to protect existing plant equipment and materials intended for re-use.

Security
General: If walls or roofs are opened for alterations or additions, provide security against unauthorised entry to the building.

#### 2.3 DEMOLITION

Asbestos removal
Method: Use wet removal methods recommended in the Safe Work Australia Code of Practice - How to safely remove asbestos.

Notice of completion
General: Give at least 5 working days' notice of completion of demolition so that adjacent structures may be inspected following completion of demolition.

Reinstatement
Assessment of damage: Use the dilapidation record to assess the damage and rectification work arising from the demolition work.

Rectification: Repair damage arising out of demolition work. Obtain written acceptance from the owner of each adjoining property of the completeness and standard of the rectification work.

## 0221 SITE PREPARATION

### 1 EXECUTION

#### 1.1 CONTROL AND PROTECTION

Erosion control
General: Plan and carry out the work so as to avoid erosion, contamination, and sedimentation of the site, surrounding areas, and drainage systems.

Dewatering
Requirement: Keep earthworks free of water. Prevent water flow over freshly laid work.

#### 1.2 TREE PROTECTION

General
Protection: Protect from damage trees which are required to be retained. Provide a temporary fence or safety barrier if required by the local authority. Comply with local authority requirements for protection of trees.

Work near trees
Harmful materials: Keep the area within the dripline free of sheds and paths, construction material and debris.

Work under trees:
- Do not remove topsoil from, or add topsoil to, the area within the dripline of the trees.

#### 1.3 SITE CLEARING

Extent
Requirement: Clear only areas to be occupied by works such as structures, paving, excavation, regrading and landscaping or other areas designated to be cleared.

Clearing and grubbing
Turf:
- Remove turf to a depth just sufficient to include the root zone.

Grubbing:
- Grub out stumps and roots over 75 mm diameter to a minimum depth of 500 mm below subgrade under buildings, embankments or paving, and 300 mm below the finished surface in unpaved areas. Backfill holes remaining after grubbing with sand material to prevent ponding of water. Compact the material to the relative density of the existing adjacent ground material.

Surplus material
Removal: Take possession of surplus material and remove it from the site.

## 0222 EARTHWORK

### 1 GENERAL

#### 1.1 STANDARDS

General
Earthwork: To the recommendations of AS 3798.

#### 1.2 INTERPRETATION

Definitions
General: For the purposes of this worksection the following definitions apply:

- Bad ground: Ground unsuitable for the works, including fill liable to subsidence, ground containing cavities, faults
or fissures, ground contaminated by harmful substances and ground that is, or becomes, soft, wet or unstable.

- Rock: Monolithic material with volume greater than 0.3 m³ that cannot be removed until broken up by rippers or percussion tools.
- Site classification: To AS 2870 and BCA 3.2.4.
- Subgrade: The trimmed or prepared earth material on which the pavement, footing or slab is constructed. Generally taken to relate to the upper line of the earth material.
- Zone of influence: A foundation zone bounded by planes extending downward and outward from the bottom edge of a footing, slab or pavement and defining the extent of foundation material having influence on the stability or support of the footings, slab or pavement.

2 EXECUTION

2.1 REMOVAL OF TOPSOIL

General
Extent: Areas of cut or fill and areas occupied by structures, pavements and embankments.
Maximum depth: 200 mm.
Disposal: Remove topsoil unsuitable for re-use from the site to AS 3798 clause 6.1.8.

2.2 EXCAVATION

Extent
Site surface: Excavate the site to the levels and profiles required for the documented structures, pavements, filling and landscaping. Make allowance for compaction, settlement or heaving.
Footings: Excavate to the required sizes and depths. Confirm that the foundation conditions meet the design bearing capacity.
Crawl space: Provide a clear space under timber or steel bearers:
- Minimum clearance: 400 mm.

Existing footings
Requirement: If excavation is required within the zone of influence of an existing footing, provide supports to the footing sufficient to prevent damage arising from the works. Use methods including temporary shoring or underpinning.

Existing services
Utility services: Contact DIAL BEFORE YOU DIG to identify location of underground utility services pipes and cables.

Bearing surfaces
Requirement: Provide even plane bearing surfaces for loadbearing elements including footings. Step to accommodate level changes. If supporting masonry, make the steps appropriate to the courses.

Grading
External areas: Grade to give falls away from buildings, minimum 1:100.
Subfloor areas: Grade the ground surface under suspended floors to drain ground or surface water away from buildings without ponding.

2.3 PREPARATION FOR FILLING

Preparation
Stripping: Prepare the ground surface before placing fill (including topsoil fill), ground slabs or load bearing elements to AS 3798 clause 6.1.5. Remove material that inhibits or prevents satisfactory placement of fill layers, loose material, debris and organic matter.

2.4 PLACING FILL

Placing fill
Placement: To BCA 3.2.2.
Layers: Place fill in near-horizontal layers of uniform thickness no greater than 150 mm after compaction, deposited systematically across the fill area.
Moisture content: Adjust the moisture content of fill during compaction to achieve the required density.

Base preparation underground slab vapour barrier or damp-proof membrane: Blind the surface with sufficient sand to cover any hard projections. Dampen the sand just before placing the vapour barrier.

0223 SERVICE TRENCHING

1 PRODUCTS

1.1 FILL MATERIALS

General
Backfill material: To AS 3798 clause 4.4, free from stones larger than 100 mm maximum dimension and as follows:
- Next to services: Do not place any particles greater in size than 25 mm within 150 mm of services.
- Under paved areas and within 4 m of structures: Coarse sand, controlled low strength material or fine crushed rock.
- In reactive clay: In sites classified M, M-D, H1, H1-D, H2, H2-D, E or E-D to AS 2870, re-use excavated site material at a moisture content within ± 1% of that of the adjoining in situ clay.

2 EXECUTION

2.1 EXCAVATING

Excavation
Requirement: Excavate for underground services in conformance with the following:
- To required lines and levels, with uniform grades.
- Straight between access chambers, inspection points and junctions.
- With stable sides.

2.2 TRENCH BACKFILL

General
Place fill: To AS 3798 clause 6.2.2 and 6.2.6.
Timing: Backfill service trenches as soon as possible after laying and bedding the service, if possible on the same working day.

Layers: Compact all material in layers not exceeding 150 mm compacted thickness. Compact each layer to the relative compaction specified before the next layer is commenced.

2.3 SURFACE RESTORATION

General
Reinstatement: Reinstall existing surfaces removed or disturbed by trench excavation to match existing and adjacent work.
1 PRODUCTS

1.1 TIMBER

Posts and rails
Hardwood: To AS 2082.
Softwood: To AS 2858.

Pickets and palings
Hardwood: To AS 2796.1, Section 8.
- Grade to AS 2796.2: Select.
Softwood: To AS 4785.1, Section 7.
Seasoned cypress pine: To AS 1810, Section 5.

Preservative treatment
Timber type: Provide only timbers with preservative treatment appropriate to the Hazard class.
Cut surfaces: Provide supplementary preservative treatment to all cut and damaged surfaces.
CCA treated timber: If proposed to be used, provide details. Test

1.2 STEEL

Steel tubes
Posts, rails, stays and pickets: To AS/NZS 1163.
- Grade: C350L0.
Post and rail finish: Hot-dip galvanized.

1.3 COMPONENTS

Steel panel fencing
Steel framing: Zinc-coated or aluminium/zinc alloy coated steel to AS 1397.
Steel sheeting: Preapanted to AS/NZS 2728.

Timber fencing
General: Conform to the timber members in the Timber fencing sizes table.

Timber fencing sizes table

<table>

* Three rail fences only

Gates
General: As documented.

Fencing for swimming pools

2 EXECUTION

2.1 GENERAL

Installation
Requirement: Adopt local industry practices for set-out, clearing of vegetation, excavation, minimum footing size materials, components and erection.

0250 LANDSCAPE – GARDENING

1 GENERAL

1.1 STANDARDS

Soils
Site and imported topsoil: To AS 4419.
Potting mixes: To AS 3743.
Composts, soil conditioners and mulches: To AS 4454.

2 PRODUCTS

2.1 MATERIAL

Topsoil
Requirement: Topsoil containing organic matter, able to support plant life and free from stones, contaminants and weeds.
Source: If the topsoil of documented quality cannot be provided from material recovered from site, provide imported topsoil.

Turf
Description: Cultivated turf of even thickness, free from weeds and other foreign matter.
Supplier: A specialist grower of cultivated turf.

Plants
General: Provide plants in conformance with the local authority approval requirements.

3 EXECUTION

3.1 GENERAL

Weed eradication
Herbicide: Eradicate weeds with a non-residual glyphosate herbicide in any of its registered formulae, at the recommended maximum application rate.

Watering
General: Comply with local restrictions.
Turf: Water immediately after laying turf until the topsoil is moistened to its full depth. Maintain moisture to this depth.
Planting: Water as required to maintain planting to the completion of the contract.

Location of fencing for private swimming pools: To AS 1926.2.
## 0271 Pavement Base and Subbase

### 1 Products

#### 1.1 Base and Subbase Material

**Granular material**

Requirement: Provide unbound granular materials, including blends of two or more different materials which when compacted develop structural stability and are uniform in grading and physical characteristics.

**Crushed rock**

Requirement: Provide crushed rock as follows:
- Base: 20 mm nominal.
- Subbase: 40 mm nominal.

**Natural gravel**

Provide unbound natural gravel as follows:
- Base: 20 mm nominal.
- Subbase: 40 mm nominal.

### 2 Execution

#### 2.1 Subgrade Preparation

**General**

Requirement: Prepare the subgrade to 0222 Earthwork.

#### 2.2 Placing Base and Subbase

**General**

Weak surfaces: Do not place material on a surface that is weakened by moisture and is unable to support, without damage, the construction plant required to perform the works.

Spreading: Spread material in uniform layers without segregation.

Moisture content: Maintain wet mixed materials at the required moisture content before and during spreading.

Add water to dry mixed materials through fine sprays to the entire surface of the layer after spreading, to bring the material to the required moisture content.

Compacted layer thickness: 200 mm maximum and 100 mm minimum. Provide layers of equal thickness in multilayer courses.

#### 2.3 Tolerances

**Surface level**

General: Provide a finished surface level which is free draining and evenly graded between level points.

#### 2.4 Base and Subbase Compaction

**General**

Construction operation: Compact each layer of fill to the required depth and density, as a systematic construction operation.

**Minimum relative compaction table**

<table>
<thead>
<tr>
<th>Item description</th>
<th>Minimum dry density ratio (modified compaction) to AS 1289.5.2.1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Subbase</td>
<td>95%</td>
</tr>
<tr>
<td>Base</td>
<td>98%</td>
</tr>
</tbody>
</table>

Compaction requirements: General: Apply uniform compactive effort, over the whole area to be compacted, until the required density is achieved or until failure is acknowledged.

### 0274 Concrete Pavement

#### 1 General

#### 1.1 Standards

**General**

Specification and supply: To AS 1379.

Materials and construction: To AS 3600.

Residential pavements: To AS 3727.1.

**Vapour barrier**

Requirement: To AS 2870 clause 5.3.3.

**Grading**

General: Grade paving to even falls to drain away from buildings to drainage outlets without ponding.

Minimum fall for drainage:
- Vehicle traffic pavements: 1:40.
- Other pavements: 1:100.

### 0276 Paving – Sand Bed

#### 1 Products

#### 1.1 Materials

**Sand**

Bedding and joint filling: Well-graded and free of deleterious materials such as soluble salts which may cause efflorescence.

**Mortar**

Mix proportions (cement:sand): 1:3.

#### 2 Execution

#### 2.1 General

**Preparation**

General: Trim the subgrade to the required profile and to suit the thickness of pavers and sand bed. Compact to a firm, even surface.

**Base course**

General: Conform to 0271 Pavement base and subbase.

**Edge restraint**

Perimeter: If not provided by other structures, provide edge restraints to bedding and units.

Type: Bed units in mortar at least 40 mm thick.

**Drainage**

Position the edge restraint and pavers so that the top of the pavers is slightly above the front edge of the edge restraint.

**Bedding course**

**Preparation**

Remove all loose material from the prepared base.

Geotextile: Place fabric between the base course and the bedding sand.

**Bedding sand**

Screed uncompacted sand over prepared base uniformly to achieve a 30 mm thick layer. Maintain sand at a uniform loose density and moisture content.
Grading
General: Grade paving to even falls to drain away from buildings to drainage outlets without ponding.
Minimum fall for drainage: 1:100.

Laying
General: Lay paving units on the screeded sand bedding to the nominated pattern, as documented.
Joints: 2 to 5 mm gap.
Cut courses: 50 mm minimum plan dimension. On footpaths and other linear elements, use at least two cut courses and maintain symmetry.
Compaction: Compact the sand bedding after laying paving units using a vibrating plate compactor and appropriate hand methods, and continue until lipping between adjoining units is eliminated.
Joint filling: Spread dry sand over the paving units and fill the joints by brooming. Carry out one or more passes with the vibrating plate compactor and refill the joints with sand. Repeat the process until the joints are completely filled.

0310 CONCRETE
1 GENERAL
1.1 STANDARDS
General
Formwork design and construction: To AS 3610.1.
Plywood formwork: To AS 6669.
Reinforced concrete construction: To AS 3600.
Specification and supply of concrete: To AS 1379.
Residential ground slabs and footings: To AS 2870.

Design
Formwork: The design of the formwork is the contractor’s responsibility.

Vapour barrier or damp-proof membrane
Requirements: Conform to 0180 Common requirements.

0331 BRICK AND BLOCK CONSTRUCTION
1 GENERAL
1.1 STANDARD
General
Materials and construction: To AS 4773.1 and AS 4773.2.

2 PRODUCTS
2.1 DURABILITY
General
Exposure environment: To AS 4773.1 clause 4.3.
Exposure locations: To AS 4773.1 clause 4.4.

2.2 MATERIALS
Bricks and blocks
Standard: To AS/NZS 4455.1 and AS/NZS 4455.3.
Salt attack resistance grade: To AS 4773.2 Table 2.1.

Mortar materials
Sand: Fine aggregate with a low clay content and free from efflorescing salts, selected for colour and grading.
Proportions: To AS 4773.1 Table 3.1.

2.3 BUILT-IN COMPONENTS
General
Durability class of built-in components: To AS 4773.1 Table 4.1.

Steel lintels
Angles and flats: Sizes to AS 4773.1 Table 12.2.
Cold-formed lintels: Designed to AS/NZS 4600.
Corrosion protection: To AS/NZS 2699.3.
Galvanizing: Do not cut after galvanizing.

Wall ties
Standard: To AS/NZS 2699.1.
Type: A.
Corrosion protection: To AS/NZS 2699.1.

Flashings and damp-proof courses
Standard: To AS/NZS 2904.

3 EXECUTION
3.1 GENERAL
Mortar mixing
General: Measure volumes accurately to the documented proportions. Machine mix for at least six minutes.

Protection from contamination
Masonry materials and components: Protect from ground moisture and contamination.

Bond
Type: Stretcher bond.

Clearance for timber frame shrinkage
General: In timber frame brick veneer construction, leave clearances between window frames and brick sill and between roof frames and the brick veneer as follows:
- Single storey frames and ground floor windows (not for slab on ground): 10 mm.
- Two storey frames and upper floor windows: 20 mm.
- Additional clearance: Accommodate additional shrinkage of unseasoned floor timbers.

Joining to existing
General: Provide a control joint where joining to existing structures. Do not tooth new masonry into existing work unless approved by a professional engineer.

Mortar joints
Joint thickness: 10 mm.
Finish: Conform to the following:
- Externally: Tool to give a dense water-shedding finish.
- Internally: If wall is to be plastered, do not rake more than 10 mm to give a key.

3.2 FACEWORK
Cleaning
General: Clean progressively as the work proceeds to remove mortar smears, stains and discolouration. Do not erode joints if using pressure spraying.
Acid solution: Do not use.

Colour mixing
Distribution: In faceworke, distribute the colour range of units evenly to prevent colour concentrations and banding.

Sills and thresholds
General: Solidly bed sills and thresholds and lay them with the top surfaces to drain away from the building.
Minimum size of unit: Three quarters full width.
3.3 SUBFLOOR WORK
Access openings
General: In internal walls, leave door-width openings beneath doorways to give access to underfloor areas.

Air vent location
General: Provide air vents to give adequate cross ventilation to the space under suspended ground floors.

3.4 CAVITY WORK
Cavity width
General: Construct minimum cavity widths in conformance with the following:
- Masonry walls: 50 mm.
- Masonry veneer walls: 40 mm between the masonry leaf and the loadbearing frame and 25 mm minimum between the masonry leaf and sheet bracing.

3.5 DAMP-PROOF COURSES
Location
General: To AS 4773.2 clause 9.6 and clause 10.5.

Installation
General: Lay in long lengths. Lap the full width of angles and intersections and 150 mm at joints. Step as necessary, but not more than 2 courses per step for brickwork and 1 course per step for blockwork. Sandwich damp-proof courses between mortar.

3.6 FLASHINGS
Location
General: To AS 4773.2 clause 9.6 and clause 10.5.

Installation
General: Sandwich flashings between mortar except where on lintels.

Weepholes
Location: Provide weepholes to external leaves of cavity walls in the course immediately above flashings, and cavity fill, and at the bottoms of unfilled cavities.

Form: Open perpends.

Maximum spacing: 1200 mm.

0342 LIGHT STEEL FRAMING

1 GENERAL

1.1 STANDARDS
General
Design, materials and protection: To AS/NZS 4600.
Residential and low-rise steel framing: To NASH-1 (National Association of Steel Housing) and NASH-2 Standard.

2 EXECUTION

2.1 GENERAL

Fabrication
Length: Cut members accurately to length so that they fit firmly against abutting members.

Service holes: Form holes by drilling or punching.

Bushes: Provide plastic bushes or grommets to site cut holes.

Swarf: Immediately remove swarf and other debris from cold-formed steel framing.

Prefabricated wall frames and trusses
Assembly: Factory assemble wall frames and trusses.

Bracing: Provide details of bracing.

Certification: Obtain certification from a professional engineer for the erected frames.

Protection: Protect from damage or distortion during storage, transport and erection. Provide temporary protection for members until permanent covering is in place.

Site work
Requirement: On-site welded connections are not permitted.

Metal separation
General: Install lagging to separate non-ferrous service pipes and accessories from the framing.

Unseasoned or CCA treated timber
General: Do not fix in contact with framing without fully painting the timber and/or the steel.

Earthing
Permanent earthing: Required.

Protection
General: Restore coatings which have been damaged by welding or other causes. Thoroughly clean affected areas back to base metal and coat with a zinc rich organic primer.

Grommets: Provide grommets to isolate piping and wiring from cold-formed steel framing.

Decks and balconies
Attachment to external walls: To BCA 3.10.6.

Vermin barriers
Requirement: Provide vermin barriers as follows:
- Brick veneer barrier: Fix 10 mm steel galvanized wire mesh to the underside of the bottom plate of external stud walls, extending across the cavity for building into brickwork.

Anti-ponding boards
Standard: To AS 4200.2.

Fascia, valley and barge boards
Requirement: Fix fascia, valley gutter boards and barge boards in conformance with the manufacturer’s recommendations.

0382 LIGHT TIMBER FRAMING

1 GENERAL

1.1 STANDARDS
General
Residential timber framed construction: To AS 1684.2, AS 1684.3 or AS 1684.4, as appropriate.
Nailplated roof trusses: To AS 1720.5.

2 EXECUTION

2.1 GENERAL

Fabrication
Length: Cut members accurately to length so that they fit firmly against abutting members.

Service holes: Form holes by drilling.

Prefabricated wall frames and trusses
Assembly: Factory assemble wall frames and trusses.

Bracing: Provide details of bracing.
Certification: Obtain certification from a professional engineer for the erected frames.

Protection: Protect from damage or distortion during storage, transport and erection. Provide temporary protection for members until permanent covering is in place.

Timber fasteners
Metal washers: Provide washers to the heads and nuts of all bolts and coach screws.
Connectors: Press connector plates fully into the frame members. Knots not permitted in plate area.

Joints
General: No gaps greater than 2 mm.

Priming
Steel: Before fixing, prime steel which is not galvanized or metallic-coated.

Decks and balconies
Attachment to external walls: To BCA 3.10.6.

Vermin barriers
Requirement: Provide vermin barriers as follows:
- Brick veneer barrier: Close nail 10 mm galvanized steel wire mesh to the underside of the bottom plate of external stud walls, extending across the cavity for building into brickwork.

Anti-ponding boards
Standard: To AS 4200.2.

Fascia, valley and barge boards
Requirement: Fix fascia, valley gutter boards and barge boards.

Damp-proof course
Requirement: Provide damp-proof courses under the bottom plate of stud walls built off slabs or masonry dwarf walls, as documented and as follows:
- External walls (not masonry veneer): Turn up at least 75 mm on the inside and tuck. Project 10 mm beyond the external slab edge or dwarf wall and turn down at 45°.
- Walls of bathrooms, shower rooms and laundries: Turn up at least 150 mm on the wet side and tuck to studs.

Flashings
Location: Provide flashings to external openings sufficient to prevent the entry of moisture. Form trays at the ends of sill flashings.
Masonry veneer construction: Extend flashing across cavities and build into brickwork.

2.2 SHEET FLOORING
Plywood
Standard: To AS/NZS 2269.0.
Bond: Type A to AS/NZS 2754.1.
Particleboard
Particleboard: To AS 1860.1, Class 1.
Compressed fibre cement sheeting
Standard: To AS/NZS 2908.2.
Category: Minimum 4.

3 EXECUTION

3.1 GENERAL
Decking on steel joists
General: Screw fix seasoned timber battens to the steel joists so that their top surfaces are aligned.

3.2 FIXING SHEET FLOORING
Particleboard flooring
Installation: To AS 1860.2.

Plywood flooring
Installation: To AS 1684.2, AS 1684.3 or AS 1684.4, as appropriate.

Compressed fibre cement flooring
Installation: Lay the length of the sheets at right angles to the joists. Stagger the end joints and locate centrally over joists. Apply adhesive to edges of sheets and firmly butt join together.
Minimum number of spans across support: 2.
Fixing: Pre-drill screw holes with 1 mm clearance over screw diameter and countersink. Fix with corrosion resistant countersunk screws.
Spacing of fasteners:
- Sheet edge and intermediate: Less than 450 mm.
- Corners and sheet edges: At least 12 mm from sheet edges and 50 mm from corners.
Wet area flooring: Stop screw heads with sealant.

3.3 FIXING DECKING
Timber decking
Installation: Lay in long lengths with the ends of each board firmly butted to the next and firmly in contact with the joists. Stagger joints and make over joists.
Gap between edges of seasoned boards: 4 mm.
Minimum number of spans across support: 3.
Nailing:
- General: Make sure the boards are in contact with the joists at the time of nailing, particularly where boards are machine nailed. If nails are to be less than 10 mm from ends of boards, pre-drill nail holes 0 to 1 mm undersize.
- Top nailing: Double nail at each bearing with nails driven flush. Offset nails at intermediate fixings or skew nail 10° in opposite directions.
Sealing: Apply 1 coat of water repellent preservative and 1 coat of finish coat to top surface of joists and all surfaces of boards before fixing.

0383 SHEET FLOORING AND DECKING

1 GENERAL

1.1 STANDARDS

General
Flooring and decking: To AS 1684.2, AS 1684.3 or AS 1684.4, as appropriate.

2 PRODUCTS

2.1 DECKING

New timber decking
Standard:
- Treated softwood to AS 4785.1 Section 4.
- Hardwood to AS 2796.1 Section 4.
1 PRODUCTS

1.1 COMPONENTS

Fasteners
Prefinished exposed fasteners: Finish with an oven baked polymer coating to match the roofing material.

Insulation spacers
Description: Proprietary spacer system to prevent excessive compression of insulation between roof sheeting and framing.

1.2 MATERIALS

Sheet metal roofing
Standard: To AS 1562.1.
Corrosion protection: To BCA Table 3.5.1.1.

Roof tiling
Standard: To AS 2049.
Accessories: Compatible with the tiles and necessary to complete the tiling.

Plastic sheet roofing
Unplasticised polyvinyl chloride (PVC-U) sheet: To AS 4256.2.
Glass fibre reinforced polyester (GRP) sheet: To AS 4256.3.
Polycarbonate: To AS 4256.5.

Skylights
Standard: To AS 4285.
Skylights (roof lights) in bushfire prone areas: To AS 3959.

Roof windows
Standard: To AS 4285.
Type: A proprietary window system for non-vertical installation in roofs pitched between 15° and 85°.
Roof windows (roof lights) in bushfire prone areas: To AS 3959.

Roof ventilators
General: A proprietary roof ventilator system, including framing, fixing, trim, seals, accessories and flashings.
Finish: Match adjacent roofing.

2 EXECUTION

2.1 GENERAL

Installation
General: To the manufacturer's recommendations.
Sheet metal roofing: To AS 1562.1.
Roof tiling: To AS 2050.
Plastic sheet roofing: To AS 1562.3.

Ventilation of roof space
General: To BCA 3.8.7.4.

2.2 ROOF PLUMBING

Jointing sheet metal rainwater goods
Sealing: Seal fasteners and mechanically fastened joints. Fill the holes of blind rivets with silicone sealant.

Flashings and cappings
Upstands: Flash projections above or through the roof with two part flashings consisting of an apron flashing and an over-flashing, with at least 100 mm vertical overlap. Provide for independent movement between the roof and the projection.
Wall abutments: Provide overflashings where roofs abut walls, stepped to the roof slope in masonry and planked cladding, otherwise raking and as follows:
- In masonry: Build into the full width of the outer leaf. Turn up within cavity, sloping inward across the cavity and fixed to or built in to the inner leaf at least 75 mm above.

Gutters
Minimum slope of eaves gutters: 1:200.
Minimum width overall of valley gutters: 400 mm.
Eaves gutter overflow measures: To BCA 3.5.3.4.

Downpipes
General: Prefabricate downpipes to the required section and shape where possible. Connect heads to gutter outlets and, if applicable, connect feet to rainwater drains.
Downpipe support: Provide supports and fixings for downpipes.

1 PRODUCTS

1.1 MATERIALS

Hardboard planks
Requirement: Proprietary wet process fibreboard planks.
Standard: To AS/NZS 1859.4.
Classification: Exterior.
Plank thickness: 9.5 mm.
Joints and edges: PVC-U extrusion.
Internal corners: Scribe.

Fibre cement planks
Requirement: Proprietary system of single faced fibre cement building planks.
Standard: To AS/NZS 2908.2. Type A Category 3.
Plank thickness: 7.5 mm.
Joints and edges: PVC-U extrusion.

Profiling sheet metal
Standard: To AS 1562.1.

Fibre cement sheet
Standard: To AS/NZS 2908.2.
Cladding, eaves and soffit linings: Type A Category 3.
Compressed cladding: Type A Category 5.
Sheet cladding: A proprietary system of single faced fibre cement sheets:
- Arrangement: Set out in even panels with joints coinciding with framing.
- Sheet thickness: 6 mm.
- Joints, corners and edges: PVC-U extrusion.

Eaves lining: Single faced fibre cement:
- Sheet thickness: 4.5 mm.
- Joints: PVC-U extrusion.

**Plastic sheets**

Requirement: Proprietary plastic sheets.
Unplasticised polyvinyl chloride (PVC-U) sheet: To AS 4256.4.
Glass fibre reinforced polyester (GRP) sheet: To AS 4256.3.
Polycarbonate: To AS 4256.5.

1.2 **COMPONENTS**

**Flashing material**

Standard: To AS/NZS 2904.

2 **EXECUTION**

2.1 **GENERAL**

**Cladding**

Installation: To the manufacturer’s recommendations.

---

**0451 WINDOWS AND GLAZED DOORS**

1 **GENERAL**

1.1 **STANDARDS**

*General*

Selection and installation: To AS 2047.

*Glazing*

Glass type and thickness: To AS 1288, if no glass type or thickness is nominated.

2 **PRODUCTS**

2.1 **GENERAL**

*Glass*

Safety glass: To AS/NZS 2208.

*Aluminium frame finishes*

Powder coating: To AS 3715.
Anodising: To AS 1231:
- Thickness: ≥ 15 to 20 microns.

*Flashings*

Standard: To AS/NZS 2904.

*Window labelling and certification*

Requirement: To AS 2047 Section 8.

*Protection of openable windows*

Fall prevention: To BCA 3.9.2.6 and BCA 3.9.2.7.
Testing: To AS 5203.

2.2 **COMPONENTS**

**Insect screens**

Aluminium framed insect screens: Provide aluminium extruded or folded box frame sections with mesh fixing channel, mitred, staked and screwed at corners. Provide an extended frame section where necessary to adapt to window opening gear.
- Mesh: Bead the mesh into the frame channel with a continuous resilient gasket, so that the mesh is taut and free of distortion.

**Bushfire screens and seals**

Protection: Protect glazed windows and doors from the ingress of embers.
Standard: AS 3959.

---

**Security screens**

Security grilles and screen doors: To AS 5039.
Installation: To AS 5040.

2.3 **HARDWARE**

**Hardware documented generically**

*General*

Provide hardware of sufficient strength and quality to perform its function, appropriate to the intended conditions of use, compatible with associated hardware, and fabricated with fixed parts firmly joined.

3 **EXECUTION**

3.1 **INSTALLATION**

**Preglazing**

Window assemblies and glazed doors: Supply inclusive of glazing, shop preglazed.

**Weatherproofing**

Flashings and weatherings: Install flashings, weather bars, drips, storm moulds, joint sealant and pointing to prevent water from penetrating the building between frames and the building structure under prevailing service conditions, including normal structural movement of the building.

**Fixing**

Packing: Pack behind fixing points with durable full width packing.

Prepared masonry openings: If fixing of timber windows to prepared anchorages is by fastening from the frame face, conceal the fasteners by sinking the heads below the surface and filling the sinking flush with a material compatible with the surface finish.

**Trim**

*General*

Provide mouldings, architraves, reveal linings, and other internal trim using materials and finishes matching the window frames. Install to make neat and clean junctions between frames and the adjoining building surfaces.

---

**0453 DOORS AND ACCESS PANELS**

1 **GENERAL**

1.1 **STANDARDS**

*General*

Timber and composite doors: To AS 2688.

2 **PRODUCTS**

2.1 **DOOR FRAMES**

*Aluminium frames*

Construction: Assembled from aluminium sections, including accessories such as buffers, pile strips, strike plates, fixing ties or brackets and cavity flashing, with provision for fixing documented hardware.

*Timber frames*

Hardwood: To AS 2796.1.
- Grade: Select.
Softwood: To AS 4785.1.
- Grade: Select.

*Joints:*
- Morticed head and through tenons.
- Trenched head:
  - Bare faced tenons on jambs.
2.2 DOORS

General
Doors: Proprietary products manufactured for interior or exterior applications and for the finish required.

Flush panel doors
General: Provide flush panel doors of balanced construction.

Construction
Standard: To AS 2688 clause 4.1 and 5.3.

Tolerances
Standard: To AS 2688 clauses 4.1 and 5.3.

Security screen doors
Standard: To AS 5039.

Bushfire screens and seals
Protection: Protect glazed windows and doors from the ingress of embers.
Standard: AS 3959.

2.3 SLIDING INTERNAL DOORS

Face mounted
General: Provide overhead track supports and head and jamb linings appropriate to the arrangement of the door, and removable pelmets at the head to allow access to the wheel carriages for adjustment.

Wheel carriages: Fully adjustable precision ball race type providing smooth, quiet operation.

Cavity sliding
Door assemblies: Proprietary product comprising steel and timber frame construction with rigid steel top, base and rear supporting members and incorporating the overhead door track, ball race type wheel carriages, guides, stops, split jamb linings and removable pelmet.

2.4 ANCILLARY MATERIALS

Flashings
Standard: To AS/NZS 2904.

3 EXECUTION

3.1 GENERAL

Security screen doors
Installation: To AS 5040.

Ceiling access
General: Trim an opening and provide a loose access panel of minimum size 600 x 400 mm.

Under floor access
Requirements: Provide a frame and a door, minimum size 620 mm wide x 600 mm high, complete with padbolt.

Priming
General: Prime timber door leaves on top and bottom edges before installation.

3.2 FRAMES

Timber frames
Building into masonry: Screw galvanized steel brackets twice to jambs and build in.

Fixing to masonry openings: Build in seasoned timber plugs to masonry joints or use proprietary expansion anchors and screw twice through jambs at each fixing.

Fixing to stud frame openings: Back screw twice to jambs at each fixing.

Heads of fasteners: Conceal where possible, otherwise sink the head below the surface and fill the sinking flush with a material compatible with the surface finish.

Finishing
Trim: Provide mouldings, architraves, reveal linings, and other internal trim using materials and finishes matching the door frames. Install to make neat and clean junctions between the frame and the adjoining building surfaces.

Weatherproofing
Flashings and weatherings: Install flashings, weather bars, drips, storm moulds, caulking and pointing to prevent water from penetrating the building between the door frame and the building structure under the prevailing service conditions, including normal structural movement of the building.

0454 OVERHEAD DOORS

1 GENERAL

1.1 STANDARD

General
Garage doors: To AS/NZS 4505.

0455 DOOR HARDWARE

1 PRODUCTS

1.1 COMPONENTS

Hinges
External doors: Push-button key and knob set and a double-cylinder dead bolt to each door.
Internal doors:
- Generally: Passage sets.
- Bathrooms, showers and toilets: Privacy sets.
- Sliding patio doors and windows: Key-lockable surface mounted bolts.

Keying
Requirement: Key doors (excluding garage doors) alike and key windows alike.

2 EXECUTION

2.1 INSTALLATION

Supply
Delivery: Deliver door hardware items, ready for installation, in individual complete sets for each door.

Mounting height
Door lockset mounting heights: 1000 mm above finished floor to centreline of spindle.

Locks
Cylinders: Fix vertically and with consistent key alignment.
Door stops
Fixing: Fix on the floor, skirting or wall, as appropriate, to prevent the door or door furniture striking the wall or other surface.

0467 GLASS COMPONENTS

1 GENERAL

1.1 SUBMISSIONS

Certification
Balustrade design: Submit a professional engineer’s certificate confirming conformance with AS/NZS 1170.1 clause 3.6.
Sealant compatibility: Submit statements from all parties to the installation certifying the compatibility of sealants and glazing systems to all substrates.

2 PRODUCTS

2.1 MIRRORS

Reflective surface
Type: Silver layer deposited on the glass or glazing plastic.
Protective coatings: Electrolytic copper coating at least 5 microns thick, and 2 coats of mirror backing and edge sealing paint having a total dry film thickness of at least 50 microns.

Safety mirror
Type: Vinyl backed Grade A safety mirror.
Safety compliance: To AS/NZS 2208.

2.2 SHOWER SCREENS

Type
General: Proprietary system comprising frames of extruded aluminium, stainless steel, or PVC-U, assembled around safety glass to form fixed panels and sliding, hinged or pivoted doors.
Glass: To AS 1288 clause 5.8.

2.3 GLASS BALUSTRADES

Glass Balustrade system
Requirement: To AS 1288 Section 7.
Glass: Grade A safety glass.

0471 THERMAL INSULATION AND PLIABLE MEMBRANES

1 GENERAL

1.1 INTERPRETATION

Definitions
General: For the purposes of this worksection the following definition applies:
- Pliable building membrane: To AS/NZS 4200.1 and equivalent to sarking-type material in the NCC.

2 PRODUCTS

2.1 MATERIALS

Insulation
Cellulosic fibre (loose fill): To AS/NZS 4859.1 Section 4.
Mineral wool blankets and cut pieces (compressible): To AS/NZS 4859.1 Section 7.
Polyester (compressible): To AS/NZS 4859.1 Section 6.
Rigid cellular foam insulation: To AS/NZS 4859.1 Section 8.
Polystyrene (extruded rigid cellular RC/PS-E): To AS 1366.4.
Polystyrene (moulded rigid cellular RC/PS-M): To AS 1366.3.
Reflective thermal insulation: To AS/NZS 4859.1, Section 9.
Wool: To AS/NZS 4859.1, Section 5.

Pliable building membrane
Standard: To AS/NZS 4200.1 and BCA 3.12.1.1.

3 EXECUTION

3.1 GENERAL

Bulk insulation
Standard: To AS 3999 and BCA 3.12.1.1.

Pliable building membrane
Standard: To AS 4200.2 and BCA 3.12.1.1.

3.2 FLOOR INSULATION

Under suspended framed floors - bulk insulation
Product type: Fibre batts.
Installation: Fit tightly between framing members. If other support is not provided, staple nylon twine to the framing and stretch tight.

Below concrete slab on ground
Product type: Rigid cellular extruded sheets.
Laying pattern: Stretcher bond, with edges tightly butted.
Damp-proof membrane: Lay over insulation.

3.3 WALLS

Framed walls – thermal break strips
Product type: Proprietary item.
Application: To steel framing with lightweight external cladding.
R-Value (m².K/W): ≥ 0.2.
Screw fixing: Button head screws at 1 m centres.
Adhesive fixing: Wallboard adhesive walnuts at 1 m centres.

Framed walls – bulk insulation
Product type: Fibre batts.
Installation: Friction fit between framing members. If other support is not provided, staple nylon twine to the framing and stretch tight.

Vapour permeable (breathable) membrane
Application: Provide a vapour permeable membrane behind the external facing material which does not provide permanent weatherproofing or may be subject to condensation forming on the internal face, including the following:
- Boards or planks fixed vertically or diagonally.
- Boards or planks fixed in exposed locations where wind driven rain can penetrate the joints.
- Unpainted or unsealed cladding.
- Masonry veneer.
Installation: Run the vapour permeable membrane horizontally on the outer face of external wall framing, over the flashing, from the bottom plate up. Pull taut over the framing and fix to framing members. Seal across the wall cavity at the top.

Horizontal laps: At least 150 mm wide, lapped to make sure water is shed to the outer face of the membrane.

### 3.4 ROOFS

**Pliable building membranes**

Sarking membrane:
- Location: Provide sarking under tile and shingle roofing.
- Installation: Lay over the roof framing with sufficient sag to allow the bulk insulation to achieve its full thickness. Overlap all edges 150 mm and seal all joints with pressure sensitive adhesive tape.

**Metal roofs – thermal break strips**

Product type: Proprietary item.
Application: To steel framing supporting sheet metal roofing.
R-Value \((m^2 \cdot K/W)\): \(\geq 0.2\).

**Metal roofs – bulk insulation**

Product type: Fibre blankets or batts.
Installation:
- Batt: Fit tightly between framing members.
- Blanket for sound insulation: Install over the roof framing, reflective thermal insulation (if any), and mesh support, so that the blanket is in continuous contact with the underside of the metal roofing sheets.

**Ceiling insulation – bulk insulation**

Product type: Fibre batts.
Installation: Fit tightly between framing members.

---

### 0551 JOINERY

1 **PRODUCTS**

1.1 **MATERIALS**

**Joinery timber**

Hardwood for trim: To AS 2796.1.
Hardwood for furniture: To AS 2796.3.
Seasoned cypress pine: To AS 1810.
Softwood for trim: To AS 4785.1.
Softwood for furniture: To AS 4785.3.

Finished sizes for milled timber: Not less than the documented dimension unless qualified by a term such as nominal, out of or ex, to which industry standards for finished sizes apply.

**Plywood**

Interior use generally: To AS/NZS 2270.
Interior use, exposed to moisture: To AS/NZS 2271.

**Wet process fibreboard (including hardboard)**

Standard: To AS/NZS 1859.4.

**Particleboard**

Standard: To AS/NZS 1859.1.

**Dry process fibreboard (including medium density fibreboard)**

Standard: To AS/NZS 1859.2.

**Decorative overlaid wood panels**

Standard: To AS/NZS 1859.3.

**Certification**

Branding: Brand panels under the authority of a recognised certification scheme applicable to the product. Locate the brand on faces or edges which will be concealed in the works.

Plywood certified formaldehyde emission class to AS/NZS 2270 and AS/NZS 2271: E1.
Reconstituted wood-based panel certified formaldehyde emission class to AS/NZS 1859 series: E1.

**High-pressure decorative laminate (HPDL) sheets**

Standard: To AS/NZS 2924.1.
Minimum thickness: Conform to the following:
- For horizontal surfaces fixed to a continuous substrate: 1.2 mm.
- For vertical surfaces fixed to a continuous substrate: 0.8 mm.
- For post formed laminate fixed to a continuous substrate: 0.8 mm.
- For vertical surfaces fixed intermittently (e.g. to studs): 3.0 mm.
- For edge strips: 0.4 mm.

</tbody>
</table>

### 1.2 JOINERY ASSEMBLIES

#### General

Standard: To AS 4386.

### 1.3 WARDROBE, CUPBOARD AND DRAWER UNITS

**Plinths, carcasses, drawer fronts, shelves and doors**

- Overlaid high moisture resistant particleboard.
- Overlaid high moisture resistant medium density fibreboard.

**Thickness:** 16 mm.

**Adjustable shelves:** Support on proprietary pins in holes bored at equal 32 mm centres vertically.

**Fasteners:** Conceal with finish.

**Drawer fronts:** Rout for drawer bottoms.

### Drawer and door hardware

**Hinge types:** Concealed metal hinges with the following features:
- Nickel plated.
- Adjustable for height, side and depth location of door.
- Integrated soft and self-closing action.
- Hold-open function.

**Slides:** Metal runners and plastic rollers with the following features:
- 30 kg loading capacity.
- Integrated soft and self-closing action.
- Closure retention.
- White thermoset powder coating or nickel plated.

### Hardware

**Requirement:** Provide details of handles and locks.

### 1.4 WORKING SURFACES

#### Laminated benchtops

**Material:** High moisture-resistant particleboard or medium density fibreboard.

**Finish:** High pressure decorative laminate sheet.

**Exposed edges:** Extend laminate over shaped nosing, finishing more than 50 mm back on underside. Splay outside corners at 45°.

**Minimum thickness:** 32 mm.

**Balance underside:** Extend laminate to the underside of benchtops if subject to excessive moisture from equipment such as dishwashers.

#### Stone benchtops

**General:** Provide stone or engineered stone slabs within the visual range of the approved samples. Repair mud veins or lines of separation that are integral to the selected pattern with resin fillers and back lining.

#### Splashbacks

**Glass:** 6 mm toughened colourback glass to AS/NZS 2208.

**Stainless steel:** Type 304, No. 4 finish.

### 2 EXECUTION

#### 2.1 JOINERY

**General**

- **Joints:** Provide materials in single lengths whenever possible. If joints are necessary, make them over supports.
- **Framing:** Frame and trim where necessary for openings, including those required by other trades.

**Fasteners**

- Installation: Secure plinths and carcasses to floors, walls, or both at not more than 600 mm centres.
- **Visibility:** Do not provide visible fasteners except in the following locations:
  - Inside cupboards and drawer units.
  - Inside open units, in which case provide proprietary caps to conceal fixings.

**Adhesives**

- **General:** Provide adhesives to transmit the loads imposed and for the rigidity of the assembly, without causing discolouration of finished surfaces.

**Finishing**

- **Junctions with structure:** Scribe plinths, benchtops, splashbacks, ends of cupboards, kickboards and returns to follow the line of structure.

#### Benchtops

**Installation:** Fix to carcass at least twice per 600 mm length of benchtop.

**Joint sealing:** Fill joints with sealant matching the finish colour and clamp with proprietary mechanical connectors.

**Edge sealing:** Seal to walls and carcasses with a sealant, which matches the finish colour.

**Glass splashbacks**

- **Adhesive:** Fix with non-acidic silicone adhesive. Apply at the rate recommended by the manufacturer.
- **Installation:** Clean the back of the glass panel and apply walnuts of adhesive together with double sided adhesive tape for temporary support, and affix directly to the substrate.

#### 2.2 TRIM

**General**

**Requirement:** Provide timber or medium density fibreboard trim, such as beads, skirtings, architraves, mouldings and stops to make neat junctions to openings and between components, finishes and adjacent surfaces.

**Proprietary items:** Provide complete with installation accessories.

**Fixing**

- To masonry walls: Wall plugs at 600 mm centres, maximum.
- To stud walls: Nail to plate or framing at 600 mm centres, maximum.

### 0572 MISCELLANEOUS FIXTURES AND APPLIANCES

#### 1 PRODUCTS

**1.1 COMPONENTS**

**General**

**Requirement:** Provide kitchen and laundry appliances, and bathroom and other fixtures as documented.
1.2 PROPRIETARY STAIR SYSTEM
General
Materials, design and construction: To BCA 3.9.1.
Balustrades: To BCA 3.9.2.
Requirement: Provide details of stairs, including proposed finishes, before fabrication and/or construction.

Beads
General: Provide a proprietary product for use with plaster.
Internal: Metallic-coated sheet AZ 150, minimum.
External: Stainless steel or PVC-U.

Water
General: Clean and free from any deleterious matter.

2 EXECUTION

2.1 PREPARATION
Substrates
General: Provide substrates as follows:
- Clean and free from any deposit or finish which may impair adhesion of plaster.
- If framed or discontinuous, support members in full lengths without splicing.
- If solid or continuous, remove excessive projections and fill voids and hollows with plaster stronger than the first coat and not weaker than the substrate.
Untrue substrates: If the substrate is not sufficiently true for conformity with the thickness limits for the plaster system, or has excessively uneven suction resulting from variations in the composition of the substrate, apply additional coats without exceeding the thickness limits for the substrate or system.

Beads
Location: Fix beads as follows:
- Angle beads: At all external corners.
- Drip beads: At all lower terminations of external plaster.
- Beads for control of movement: At all control joints.
- Stop beads: At all terminations of plaster and junctions with other materials or plaster systems.

Joint mixing: Machine mix for 3 to 6 minutes.
Strength of successive coats: Make sure successive coats are no richer in binder than the coat to which they are applied.

Mix proportion table - Cement render, by volume

</tr>
</tbody>
</table>

Lath
General: Provide a proprietary product for use with plaster.
Internal: Expanded metal to AS 1397 coating class Z350, minimum.
External: Stainless steel or PVC-U.

Bonds
General: If bonding treatment is required, throw a wet mix onto the background of 1 part cement to 2 parts sand.
Curing: Keep continuously moist for 5 days or more and allow to dry before applying plaster coats.

Embedded items
General: If there are water pipes and other embedded items, sheath them to permit thermal movement.

Lath
Location: Provide lath as follows:
- Chases: If chases or recesses are 50 mm wide or greater, fix metal lath extending 75 mm or more beyond each side of the chase or recess.
- Metal and other non-porous backgrounds: Fix metal lath to provide a key.

Weepholes
Requirement: Keep opening free of plaster. Maintain consistent opening size.

2.2 APPLICATION
Control joints
General: Provide joints in the finish to coincide with control joints in the substrate. Make sure that the joint in the substrate is not bridged during plastering.

Tolerances
General: Finish plane surfaces within a tolerance of 6 mm in 2400 mm, determined using a 2400 mm straightedge placed anywhere in any direction. Finish corners, angles, edges and curved surfaces within equivalent tolerances.
Plaster thickness table

<table>
<thead>
<tr>
<th>Substrate</th>
<th>Cement render, total thickness of single or multi-coat work (mm)</th>

<tr>
<td>Lightweight concrete and blocks</td>
<td>12 min</td>
</tr>
<tr>
<td>Metal lath measured from the face of the lath.</td>
<td>18 min</td>
</tr>
</tbody>
</table>

Curing
General: Prevent premature or uneven drying out and protect from the sun and wind.
Keeping moist: If a proprietary curing agent is not used, keep the plaster moist as follows:
- Base coats and single coat systems: Keep continuously moist for 2 days and allow to dry for 5 days before applying further plaster coats.
- Finish coats: Keep continuously moist for 2 days.

0621 WATERPROOFING - WET AREAS

1 GENERAL

1.1 STANDARDS
Wet areas
Standard: To AS 3740.

2 PRODUCTS

2.1 PRODUCTS
Membranes
Standard: To AS/NZS 4858.
Membrane systems
Requirement: Provide a proprietary membrane system suitable for the intended internal waterproofing.
Shower tray
General: Purpose-made jointless shower tray, with wall upstands at least 50 mm higher than the hob upstands. Set hob masonry on the inside of the tray upstands.

3 EXECUTION

3.1 PREPARATION
Substrates
General: Provide substrates as follows:
- Clean and free of any deposit or finish which may impair adhesion of membranes.
- If walls or floors are framed or discontinuous, support members in full lengths without splicing.
- If floors are solid or continuous remove excessive projections and fill voids, hollows and cracks.
Concrete substrates: Cure for at least 28 days.
Bond breakers
Requirement: After the priming of surfaces, provide bond breakers at all wall/floor, hob/wall junctions and at control joints where the membrane is bonded to the substrate.

3.2 APPLICATION
Protection
Damage: Protect membrane from damage during installation and for the period after installation until the membrane achieves its service characteristics that resist damage.

0631 CERAMIC TILING

1 GENERAL

1.1 STANDARDS
Tiling
General: Conform to the recommendations of AS 3958.1.
Slip resistance
Stair treads, ramps and landings: Classification to AS 4586.

2 PRODUCTS

2.1 MATERIALS
Adhesives
Standard: To AS ISO 13007.1.
PVA (polyvinyl acetate)-based adhesives: Do not use in wet areas or externally.

Mortar materials
Cement type to AS 3972: GP.
Sand: Fine aggregate with a low clay content selected for grading, sharp and free from efflorescing salts.
Bedding mortar
Mix proportion (cement:sand), by volume: Select proportions from the range 1:3 to 1:4 for satisfactory adhesion. Provide minimum water.
Water
General: Clean and free from any deleterious matter.
Grout
Cement-based proprietary grout: Mix with water. Fine sand may be added as a filler in wider joints.
Terracotta tiles: Provide proprietary polymer modified grout.
General purpose cement based grout: Mix with fine sand. Provide minimum water consistent with workability.
Pigments for coloured grout: Colourfast fillers compatible with the grout material. For cement-based grouts, provide lime-proof natural or synthetic metallic oxides compatible with cement.

3  EXECUTION

3.1  APPLICATION
Preparation of substrate
General: Conform to the following:
- Clean off any deposit or finish which may impair adhesion or location of tiles.
- Compatible with all components of floor system.
Floor finish dividers
General: Finish tiled floors at junctions with differing floor finishes with a corrosion-resistant metal dividing strip fixed to the substrate. If changes of floor finish occur at doorways, make the junction directly below the closed door.
Bath ventilation
General: Ventilate the space below fully enclosed baths with at least 2 vermin proofed ventilating tiles.
Falls and levels
General: Grade floor tiling to even and correct falls generally and to floor wastes and elsewhere as required. Make level junctions with walls. If falls are not required, lay level.
Fall, general: 1:100 minimum.
Fall, in shower areas: 1:60 minimum.
Change of finish: Maintain finished floor level across changes of floor finish including carpet.
Sealant joints
General: Provide sealant joints filled with silicone sealant and finish flush with the tile surface where tiling joins sanitary fixtures and at internal corners of walls.

0651 RESILIENT FINISHES

1  GENERAL

1.1  STANDARDS
General
Installation: To AS 1884.

2  PRODUCTS

2.1  MATERIALS
Wet process fibreboard (hardboard) hard underlay
Standard: To AS/NZS 1859.4.
Classification: General purpose medium board, manufactured specifically as flooring underlay.
Thickness: 5.5 mm.

3  EXECUTION

3.1  PREPARATION
Substrates
General: To AS 1884 Section 3.
Concrete substrates
Substrate rectification: Conform to the following:
- Surface treatments: Mechanically remove any incompatible surface treatments, including the following:
  - Sealers and hardeners.
  - Curing compunds.
  - Waterproofing additives.
- Planeness, smoothness, projections: Remove projections and fill voids and hollows with a self-smoothing self-levelling compound compatible with the adhesive. Allow filling or levelling compound to dry to manufacturer's recommendations.
Cleaning: Remove loose materials or dust.
Timber, plywood and particleboard substrates
Substrate rectification: Remove projections. If conformance to a planeness tolerance of 4 mm in 2 m determined using a 2 m straightedge cannot be achieved, provide an underlay in brick pattern with joints avoiding substrate joints.

3.2  SHEET AND TILE INSTALLATION
General
Fixtures: Remove door stops and other fixtures, and refix in positions undamaged on completion of the installation.
Sheet set-out
General: Set out sheets to give the minimum number of joints. Position joints away from areas of high stress. Run sheet joints parallel with the long sides of floor areas, vertically on non-horizontal surfaces.
Tile set-out
General: Set out tiles from centre of room. If possible, cut tiles at margins only to give a cut dimension of at least 100 mm x full tile width. Match edges and align patterns. Arrange the cut tiles so that any variation in appearance is minimised.
Joints
Non-welded: Butt edges together to form tight neat joints showing no visible open seams.
Chemical welding: Apply seaming compound 100 mm wide to the substrate centrally under the seam. Roll the seam until the compound is forced up into the joint. Clean off flush using a damp cloth.
Junctions
General: Scribe neatly up to returns, edges, fixtures and fittings. Finish flush with adjoining surfaces.

3.3  COMPLETION
Protection of sheet materials
Finished floor surface: Keep traffic off floors for minimum 24 hours after laying or until bonding has set, whichever period is the longer. Avoid contact with water for minimum 7 days.
Reinstatement
Extent: Repair or replace faulty or damaged work. If the work cannot be repaired satisfactorily, replace the whole area affected.

Cleaning
General: Clean the finished surface. Buff and polish. Before the date for practical completion, mop and leave the finished surface clean and undamaged on completion.

0652 CARPETS

1 PRODUCTS

1.1 MATERIALS

Carpet
Minimum grade: Residential Medium Duty under the Australian Carpet Classification Scheme.
Total VOC emission tested to ISO 10580: < 0.5 mg/m²/h.

Wet process fibreboard (hardboard) hard underlay
Standard: To AS/NZS 1859.4.
Classification: General purpose medium board, manufactured specifically as flooring underlay.
Thickness: 5.5 mm.

Soft underlay
Standard: To AS 4288.

Hot-melt adhesive tapes
General: Glass fibre and cotton thermoplastic adhesive-coated tape 60 mm wide on a 90 mm wide metal foil base and backed with silicon-coated release paper.

Preformed carpet grippers
General: Architectural plywood carpet grippers with 3 rows of corrosion-resistant angled pins of length appropriate to the carpet type to AS 2455.1 clause 1.5.4.

Edge strips
Location: At exposed edges of the carpet, and at junctions with different floor finishes or finishes of a different thickness. Where edge strips occur at doorways, locate the junctions directly below the closed door.

2 EXECUTION

2.1 PREPARATION

Substrates
Cleaning concrete surfaces: Mechanically remove the following surface treatments:
- Sealers and hardeners.
- Curing compounds.

Cleaning timber surfaces: Remove oil, grease and traces of applied finishes.
Concrete substrate rectification: Remove projections and fill voids and hollows with a levelling compound compatible with the adhesive.

Timber substrate rectification: Remove projections. If conformance to a flatness tolerance of 6 mm in 3000 mm, determined using a 3000 mm straightedge placed anywhere in any direction cannot be achieved, fix a hardboard underlay in brick pattern with joints avoiding substrate joints.

Fixtures: Remove door stops and other fixtures, and refix in position undamaged on completion of the installation.

2.2 LAYING CARPET

Standard
General: To AS 2455.1.
0655 TIMBER FLOORING

1 PRODUCTS

1.1 GENERAL

Storage and handling
General: Deliver timber flooring to site in unbroken wrapping or packs. Store in dry conditions a minimum 100 mm above the subfloor. Do not store on the subfloor until the moisture content of the subfloor is suitable for the installation of the floor. Do not store in areas of wet plaster or paint.

Adhesive
Ventilation: Provide ventilation appropriate for moisture curing.

1.2 STRIP FLOORING

New timber
General: Conform to the Grading table.

<table>
<thead>
<tr>
<th>Product</th>
<th>Standard</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hardwood</td>
<td>AS 2796.2</td>
<td>High Feature Grade if available for the species selected, otherwise Select Grade</td>
</tr>
<tr>
<td>Seasoned cypress pine</td>
<td>AS 1810</td>
<td>1</td>
</tr>
<tr>
<td>Softwood - pinus ssp</td>
<td>AS 4785.2</td>
<td>Appearance</td>
</tr>
<tr>
<td>Softwood - other</td>
<td>AS 4785.2</td>
<td>Select</td>
</tr>
</tbody>
</table>

Recycled timber
Standard: To FWPA PN06.1039.
- Grading: To Section 5.1.

2 EXECUTION

2.1 SUPPORT FIXING

Battens for strip flooring on steel joists
General: Screw fix seasoned battens along the steel joists with countersunk screws so that their top surfaces are aligned.

2.2 FIXING TIMBER FLOORING

Control joints
Perimeters: Provide 10 mm wide expansion joints against vertical building elements.

Strip flooring: For floors greater than 6 m wide select from the following:
- Partially cramp strip flooring to allow a 1 mm gap every 600 mm or 1.5 mm every metre.
- Divide floors into maximum widths of 6 m with expansion joints 12 mm wide filled with cork.

Adhesive fixing
Strip flooring: Use a polyurethane elastomer adhesive in addition to nails.

Mechanical fixing
General: Make sure boards are in contact with the subfloor at the time of fixing, particularly where boards are machine nailed. If nails are to be less than 12 mm from ends of boards, pre-drill nail holes 0.5 to 1 mm undersize.

Top nailing: For boards of 65 to 130 mm cover width, use two nails.

Secret fixing: Do not use boards of more than 85 mm cover width, and use one staple or cleat skewed at 45° through edges.

Sinking: Punch nails 3 mm below finished surfaces and fill the sinking flush with a material tinted to match the darker tone of the flooring which is compatible with the floor finish.

Strip flooring
General: Blend floor boards from more than one pack to distribute the colour range and grade features throughout the floor.

Installation: Lay in straight and parallel lines with each board firmly butted to the next and firmly in contact with the subfloor. If land over joists or battens cramp sufficient only to bring the boards together and no more than 800 mm of flooring at any one time. With secret fixing do not cramp more than one board at a time.

Fixing to softwood joists or battens: Apply adhesive in addition to mechanical fixing.

2.3 COMPLETION

Protection
General: Provide protection as follows:
- Floors: With hardboard taped at all butt joints. Do not cover with sheet plastic.
- Stair treads: Full timber or plywood casing.

0656 FLOOR SANDING AND FINISHING

1 GENERAL

1.1 STANDARDS

Timber flooring - sanding and finishing:
General: To AS 4786.2.

0671 PAINTING

1 GENERAL

1.1 STANDARDS

Painting
General: To the recommendations of those parts of AS/NZS 2311 referenced in this worksection.

2 PRODUCTS

2.1 PAINTING MATERIAL

Low VOC emitting paints
VOC limits for low odour/low environmental impact paint types:
- Primers and undercoats: < 65 g/litre.
- Low gloss white or light coloured latex paints for wall areas: < 16 g/litre.
- Coloured low gloss latex paints: < 16 g/litre.
- Gloss latex paints for timber doors and trims: < 75 g/litre.

Combinations
General: Do not combine products from different manufacturers in a system.

Clear timber finish systems: Provide only the combinations of putty, stain and sealer recommended by the manufacturer of the top coats.
Handling
Delivery: Deliver paints to the site in the manufacturer's labelled and unopened containers.

Putty and fillers
Material: To the recommendation of the paint system manufacturer as suitable for the substrate and compatible with the primer.

Tinting
General: Provide only products which are colour tinted by the manufacturer or supplier.

3 EXECUTION

3.1 PREPARATION

Order of work
Other trades: Before painting, complete the work of other trades as far as practicable within the area to be painted, except for the installation of fittings, floor sanding and laying flooring materials.

Clear finishes: Complete clear timber finishes before commencing opaque paint finishes in the same area.

Protection
General: Before painting, clean the area and protect from dust contamination. Use drop sheets and masking agents to protect surfaces, including finished surfaces and adjacent surfaces during painting.

Fixtures and furniture: Remove door furniture, switch plates, light fittings and other fixtures before painting, and refix in position on completion of painting.

Wet paint warning
Notice: Place in a conspicuous location and do not remove until the paint is dry.

Substrate preparation - generally
General: Prepare substrates to receive the painting systems.

Cleaning: Clean down the substrate surface. Do not cause damage to the substrate or the surroundings.

Filling: Fill cracks and holes with fillers, sealants, putties or grouting cements as appropriate for the finishing system and substrate, and sand smooth.

- Clear finish: Provide filler tinted to match the substrate.

Clear timber finish systems: Prepare the surface so that its attributes will show through the clear finish without blemishes, using methods including the following:
- Removal of bruises.
- Removal of discolourations, including staining by oil, grease and nailheads.
- Bleaching where necessary to match the timber colour sample.
- Puttying.
- Fine sanding, with the last abrasive no coarser than 220 grit, so that there are no scratches across the grain.

Unpainted surfaces
Standard: To AS/NZS 2311 Section 3.

Previously painted surfaces
Standard: To AS/NZS 2311 Section 7.

3.2 PAINTING

Light levels
General: During preparation of surfaces, painting and inspection, maintain light levels to ≥ 400 lux to allow close examination of the entire process.

Paint application
Standard: To AS/NZS 2311 Section 6.

Timing: Apply the first coat immediately after substrate preparation and before contamination of the substrate can occur. Apply subsequent coats after the manufacturer’s recommended drying period has elapsed.

Priming before fixing
General: Apply one coat of wood primer (2 coats to end grain) to the back of the following before fixing in position:
- External fascia boards.
- Timber door and window frames.
- Bottoms of external doors.
- Associated trims and glazing beads.
- Timber board cladding.

Spraying
General: If the paint application is by spraying, use conventional or airless equipment that conforms to the following:
- Satisfactorily atomises paint being applied.
- Does not require paint to be thinned beyond the maximum amount recommended by the manufacturer.
- Does not introduce oil, water or other contaminants into the applied paint.

Paint with known health hazards: Not permitted on site.

Sanding
Clear finishes: Sand the sealer, using abrasive no coarser than 320 grit, without cutting through the colour. Take special care with round surfaces and edges.

Repair
Requirement: Clean off marks, paint spots and stains progressively and restore damaged surfaces to their original condition. Touch up new damaged decorative paintwork or misses with the paint batch used in the original application.

Repair of galvanizing
Cleaning: For galvanized surfaces which have been subsequently welded, or which have been welded, prime the affected area.

Primer: Type 2 organic zinc rich coating for the protection of steel to AS/NZS 3750.9.

Services
General: Paint new services and equipment if not embedded, except chromium, anodised aluminium, GRP, PVC-U, stainless steel, non-metallic flexible materials and normally lubricated machined surfaces. Repaint proprietary items only if damaged.

3.3 PAINT SYSTEMS

Paint system description
Generally: The paint system is referred to by its final coat. Primers and undercoats: Provide primers and undercoats recommended by the manufacturer of the selected final coat as suitable for the substrate and the final coat.

Number of coats: Unless specified as one or two coat systems, each paint system consists of at least 3 coats.

0802 HYDRAULIC DESIGN AND INSTALL

1 GENERAL

1.1 AIR CONDITIONING DESIGN

Design criteria
Outside design conditions: Use outdoor design conditions listed in AIRAH DA09, Table 1 or Table 1A for the following:
- The location geographically closest to the site.
- Comfort (or non-critical process) conditions.

Inside design conditions:
- Summer: 24°C dry bulb, 50% relative humidity.
- Winter: 21°C dry bulb.

Temperature variation: Limit the temperature difference in air conditioned spaces served by the same zone or system to 2°C as follows:
- Between any 2 points in the space from floor level to 1500 mm above floor level.
- More than 2000 mm from cooking equipment and more than 1000 mm from any other appliance.
- When outside conditions are in the range specified above.
- After the plant has been operating for one hour.
- With the temperatures measured in the same 5 minute period.

Zoning: Divide the systems into temperature controlled zones to meet the specified permissible limits in temperature variation and the system divisions documented.

Fresh air: Supply fresh air to spaces with air conditioning systems via the air handling system.

Heating: Reverse cycle.

Windows, walls, floors and roofs: Refer to drawings for construction and insulation.

Ambient noise emitted: Lower than the level that can be heard within a habitable room in any neighbouring residential premises, regardless of whether any door or window to that room is open.

2 PRODUCTS

2.1 AIR CONDITIONING EQUIPMENT

Standards
Ducted air conditioners: To AS/NZS 3823.1.2.
Non-ducted air conditioners: To AS/NZS 3823.1.1.

Controls
General: Provide the following functions:
- Temperature control for each zone located to accurately sense zone temperature.
- Fan speed selection for multi and variable speed fans.
- Day/night zone changeover if scheduled.
- Time switch for each system with ≥ 6 temperature programs per day, separate programs for each day of the week, manual set point over ride and Vacation temperature set back.

0802 HYDRAULIC DESIGN AND INSTALL

1 GENERAL

1.1 STANDARDS

General
Plumbing and drainage: To the AS/NZS 3500 series.
Authorised products: Listed in the WaterMark Product Database, unless otherwise required by the network utility operator.

2 EXECUTION

2.1 INSTALLATION

Connections to Network Utility Operator mains
General: Excavate to locate and expose the connection points and connect to the Network Utility Operator mains.
On completion, backfill and compact the excavation and reinstate surfaces and elements which have been disturbed such as roads, pavements, kerbs, footpaths and nature strips.

Piping
Embedded pipes: Do not embed pipes that operate under pressure in concrete or surfacing material.
Concealment: If practicable, conceal piping and fittings requiring maintenance or servicing so that they are accessible within non-habitable enclosed spaces such as roof spaces, subfloor spaces and ducts. Keep pipelines in subfloor spaces at least 150 mm above ground and make sure access can be provided throughout for inspection. Provide at least 25 mm clearance between adjacent pipelines (measured from the piping insulation where applicable).
Cover plates: If exposed piping emerges from wall, floor or ceiling finishes, provide cover plates of non-ferrous metal, finished to match the piping, or of stainless steel.
Pipe support materials: The same as the piping, or galvanized or non-ferrous metals, with bonded PVC-U or glass fibre woven tape sleeves where needed to separate dissimilar metals.
2.2 FINISHES

General
Requirement: Finish exposed piping, including fittings and supports as follows:
- In internal locations such as toilet and kitchen areas: Chrome plate copper piping to AS 1192 service condition 2, bright.
- Externally and steel piping or worn fittings internally: Paint.
- In concealed but accessible spaces (including cupboards and non-habitable enclosed spaces): Leave copper and plastic unpainted except for required identification marking. Prime steel piping and iron fittings.
- Valves: Finish valves to match connected piping.

2.3 COLD AND HEATED WATER

Standards
General: To AS/NZS 3500.1 and AS/NZS 3500.4.

Water heaters
Location: Locate water heaters where they can be maintained or replaced without damaging adjacent structures, fixtures or finishes.

Types:
- Electric water heaters: To AS/NZS 4692.1.
- Gas hot water heaters: To AS/NZS 5263.1.2. If a flue damper is available for the water heater supplied, provide one.
  - Energy performance: To AS/NZS 4552.2.
- Solar water heaters: To AS/NZS 2712.
- Heat pump water heaters: To AS/NZS 2712.
- Gas instantaneous water heaters: To AS/NZS 5601.1.
- Electric instantaneous water heaters: To AS/NZS 60335.2.35.

Tariff: Install so that the heating system qualifies for the tariff concession or subsidy offered by the statutory authority.

Isolating valves: Provide isolation valves to water heaters.

Heated water temperature
Standard: To AS/NZS 3500.4.

2.4 STORMWATER

Standards
General: To AS/NZS 3500.3.

Downpipe connections
General: Turn up drain branch pipelines to finish 50 mm above finished ground or pavement level.

Subsoil drains
Connection: Connect subsoil drains to the stormwater drainage system.

Trench width: Minimum 450 mm.

Subsoil drains: Provide proprietary perforated plastic pipe.

Filter fabric: Provide a polymeric fabric formed from a plastic yarn containing stabilisers or inhibitors to make the filaments resistant to deterioration due to ultraviolet light.

Filter sock: Provide a polyester permeable sock capable of retaining particles of 0.25 mm size. Securely fit or join the sock at each joint.

Pits
Cover levels: Locate the top of covers or gratings, including frames as follows:
- In paved areas: Flush with the paving surface.
- In landscaped areas: 25 mm above finished surface.

- Gratings taking surface water runoff: Set to receive the runoff without ponding.

2.5 WASTEWATER

Standards
General: To AS/NZS 3500.2.

Cleaning
During construction: Use temporary covers to openings and keep the system free of debris.

On completion: Clean and flush the system.

Septic tanks
Standard: To AS/NZS 1546.1.

Vent pipes
Staying to roof: If fixings for stays penetrate the roof covering, seal the penetrations and make watertight.

Terminations: Provide bird-proof vent cowls made of the same material and colour as the vent pipe.

2.6 RAINWATER TANKS

Standards
Metal tanks and rainwater goods: To AS/NZS 2179.1.

Design and installation: To the recommendations of SA HB 230.

2.7 GAS

Standard
Reticulated gas systems: To AS/NZS 5601.1.

Buried pipes
Warning tape: During backfilling, lay plastic warning tape 300 mm above and for the full length of buried gas pipes.

- Type: Minimum 100 mm wide, with GAS PIPE UNDER marked continuously.

Commissioning
General: On completion of installation and testing, turn on isolating and control valves and purge and charge the installation.

0902 ELECTRICAL DESIGN AND INSTALL

1 GENERAL

1.1 STANDARDS

General
Electrical installation: To AS/NZS 3000.

Electrical cable selection: To AS/NZS 3008.1.1.

Communications cable systems: To AS/CA S008, AS/CA S009, AS/NZS 11801.1 and SA/SNZ HB 252.

1.2 INTERPRETATION

Abbreviations
General: For the purposes of this worksection the following abbreviations apply:
- ED S&IR: The Electricity Distributor’s Service and Installation Rules.
- RCD: Residual Current Device.

2 EXECUTION

2.1 GENERAL

Applications and compliance
General: Submit all necessary applications for electricity supply. Liaise with the electricity distributor and comply with the ED S&IR.
Consumers mains and metering
General: Provide consumers mains and connect them to the electricity distributor mains.

Switchboards
Standard: To AS/NZS 61439.3.
Construction: Enclosed type with a hinged lid. Provide circuit breakers and RCDs.
Location: Verify that the location selected is compliant before proceeding.

Maximum demand and spare capacity
General: Calculate the maximum demand of the installation in accordance with AS/NZS 3000 and provide a copy of the calculations.
Spare capacity: Provide the following:
- > 10% spare capacity in mains and submains.
- > 25% spare capacity in final subcircuits.
Spare spaces: Provide switchboards with ≥ 25% spare positions for future single phase circuit breakers.

Accessories
General: Provide accessories necessary for a complete installation including but not limited to switches, dimmers, socket outlets, and telecommunications outlets. Provide accessories located in close proximity of the same size and material and from the same manufacture.
Mounting: Flush mount accessories to the wall (or ceiling) unless noted otherwise. Provide proprietary wall boxes in masonry and wall brackets in stud walls.

Wiring
Sequence of work: Install conduits and cables before the installation of wall and ceiling linings, and before any external landscaping works.
Installation: Do not penetrate damp-proof courses. Arrange wiring such that it does not bridge the cavity in external masonry.
Minimum conduit diameter: 20 mm.
Conduits for future use: Provide a non-metallic drawstring having a breaking strain > 100 kg.

Luminares
Standard: to AS/NZS 60598.1.
Non-specified luminaire: Provide a bayonet cap batten holder and lamp at each lighting point location where no luminaire is documented.
Minimum energy performance standards:
- General: To AS 4782.2 and AS/NZS 4783.2.
- Self-ballasted lamps: To AS 4847.2.
- Incandescent lamps: To AS 4934.2.

Appliances
General: Provide final subcircuits and terminate at fixed appliances, hot water units, packaged air conditioning and other plant and equipment.
Isolation switch: Provide isolating switch adjacent to equipment.

Telecommunications
General: Liaise with the telecommunication services carrier.
Installations requiring telephony only: To AS/CA S009.
Small office/home office installations: Category 6, to AS/CA S009 and AS 11801.4.

Television systems
General: Provide a digital television distribution system to AS/NZS 1367 and conforming to the recommendations of Broadcast Australia and ACMA.
Antennas: Provide and locate antennas to receive all locally available free-to-air television stations.

Network systems
General: Provide a coaxial cabling system suitable for satellite or cable network operator’s services.

Intruder alarm system
Standard: To AS/NZS 2201.1.

Smoke detection system
General: Provide smoke alarms to the requirements of the BCA 3.7.5. Connect smoke alarms to mains power.

Labelling
General: Provide labels.
Telecommunications cables: Label telecommunications cables, cross connects and outlets in accordance with the requirements of AS/NZS 11801.1.

2.2 COMPLETION

Testing and certification
Electrical installations: Test to AS/NZS 3017. Provide a certificate showing test results, certifying compliance with AS/NZS 3000.
Communications cable systems: To AS 11801.4. Provide a certificate showing test results and certifying compliance with AS 11801.4.
Submission: Provide ACMA Telecommunications Cabling Advice (TCA1) form.
Television and audio systems: To AS/NZS 1367. Test the complete television and audio system. Provide a certificate showing test results and certifying compliance.
The following documents are incorporated into this worksection by reference:

- AS/CA S008 2010 Requirements for customer cabling products
- AS/CA S009 2013 Installation requirements for customer cabling (Wiring Rules)
- AS/NZS 1163 2016 Cold-formed structural steel hollow sections
- AS/NZS 1170 Structural design actions
- AS/NZS 1170.1 2002 Permanent, imposed and other actions
- AS 1192 2004 Electroplated coatings - Nickel and chromium
- AS 1231 2000 Aluminium and aluminium alloys - Anodic oxidation coatings
